## TMX Workholding Fulfills Order of Massive 71" Engineered Solutions Chuck

Schaumburg, IL (November 20, 2014) – TMX Workholding recently delivered a colossal 71", manual chuck. Weighing in at 8,000 lbs. the 71" independent 4-jaw manual chuck is constructed out of heavy duty forged steel. The chuck was engineered to order for a large manufacturer in Louisiana for use on a large welding positioner.

Engineered to order workholding has become a specialty of TMX Workholding. After discussing the customer's needs, TMX is able to design a customized workholding solution to meet even the most stringent demands. Aside from the standard workholding offerings such as manual, collet and power chucks, the Engineered Solutions line has really allowed TMX the opportunity to work closely with customers and end users throughout the design process. The engineered to order approach allows TMX to address a customer's part geometry and throughput requirements, in an effort to provide a cost effective solution that exceed their expectations.

"Working closely with the customer, we developed this 71" 4-jaw, Heavy Duty chuck for use on a large welding positioner. This manufacturer builds products for the Oil and Gas Industry and needed a large chuck to hold its BOP (blowout prevention) valves while it completes its cladding process" said Shawn Luschei, TMX Workholding Solutions, Vice President. "We are now in the process of designing a 74" version of the same chuck for a slightly larger positioner."

TMX Workholding Solutions is an operating business unit of Toolmex Industrial Solutions. Founded in 1973, Toolmex has over forty years' experience in providing engineered industrial equipment, tools and machinery. Each of Toolmex business units, including Toolmex Lathes, Elektrim Motors, TMX Workholding and Cutting Tools, are recognized industry leaders throughout North American and Latin American markets. Toolmex global headquarters are located in Natick, Massachusetts with regional facilities in Schaumburg, Illinois.
